June 2011

Venture Lamps – Safe and Compliant

Following the announcement made on 30th June by the European Lamp Companies Federation (ELC), that certain lamps may contain small amounts of harmless low level radiation emitter materials, Venture Lighting can unequivocally confirm that in this regard, all Venture HID lamps are completely harmless to humans, animals and the environment. This applies to the complete life of the lamp, from initial manufacture through to final disposal.

In line with other major lamp manufactures, Venture Lighting use minuscule amounts of radioactive materials, namely Krypton 85 and even smaller amounts of Thorium, inside our arc tubes and have been safely and successfully doing so for the past 15 years.

These materials are necessary to ensure energy efficient operation of our lamps and as stated the dosage is minuscule, but safe.

The European Lamp Companies Federation, will over the coming months be working with European and International members to harmonize regulations and establish exemptions and official guidelines for the control of these safe lamps.

Additional information can be found at www.lamp-regulations.org but also please contact our Sales Office direct on 0845 230 222.
